If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

***EXAMINER'S AMENDMENT***

1. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

2. The Amendment filed on April 25, 2011 has been amended as follows:

In Claim 15, line 2, the phrase "the optical path" has been changed to --an optical path--;

In Claim 19, line 2, the phrase "refractive index changes" has been changed to --refractive index changes of the recording layers--;

In Claim 24, line 23, the phrase "the optical path" has been changed to --an optical path--; and

In Claim 36, lines 2 and 3, the phrase "refractive index changes" has been changed to --refractive index changes of the recording layers--.

3. Authorization for this examiner's amendment was given in a telephone interview with Mr. Douglas P. Mueller on May 5, 2011.

Art Unit: 2627

***Allowable Subject Matter***

4. Claims 1-3, 11-19, and 24-40 are allowable over prior art.

5. The following is an Examiner's statement of reasons for the indication of the underlined allowable subject matter:

As in claim 1, the prior art of record fails to teach or fairly suggest an optical information reproduction device having following feature:

An optical information reproduction device, comprising:

An information recording medium that includes a recording unit having a multilayer structure of recording layers capable of recording information three-dimensionally;

a first semiconductor laser light source for emitting reproduction light having a wavelength  $\lambda_1$ , and for emitting recording light with a wavelength of  $\lambda_2$  different from the wavelength  $\lambda_1$ ;

an objective lens for focusing the reproduction light emitted from the first semiconductor laser light source on the recording unit of the information recording medium, and for focusing the recording light on the recording unit of the information recording medium; and

wherein the information recording medium has a track pitch of no more than 1.3 times the wavelength  $\lambda_1$  of the reproduction

Art Unit: 2627

light, and the first semiconductor laser light source has a characteristic such that it emits the reproduction light in which an amplitude of a polarized light component that is polarized perpendicular to the track direction is greater than that of other polarized light components], and further comprising an optical component that functions so as to convert the state of polarization of the recording light emitted from the first semiconductor laser light source, whereby the amplitude of a polarized light component of the recording light that is polarized perpendicular to the track direction is caused to be greater than that of other polarized light components compared with the state of polarization before the conversion.

As in claim 24, the prior art of record fails to teach or fairly suggest an optical information reproduction device having following feature:

An optical information reproduction device, comprising:

An information recording medium that includes a recording unit having a multilayer structure of recording layers capable of recording information three-dimensionally;

a first semiconductor laser light source for emitting reproduction light having a wavelength  $\lambda_1$ ;

an objective lens for focusing the reproduction light emitted from the first semiconductor laser light source on the

Art Unit: 2627

recording unit of the information recording medium,

wherein the information recording medium has a track pitch of no more than 1.3 times the wavelength  $\lambda_1$  of the reproduction light, and an optical component is provided along the optical path between the first semiconductor laser light source and the objective lens so as to convert the state of polarization of the recording light emitted from the first semiconductor laser light source, whereby the amplitude of a polarized light component of the recording light that is polarized perpendicular to the track direction is caused to be greater than that of other polarized light components compared with the state of polarization before the conversion.

The features indicated above, in combination with the other elements of the claims, are not anticipated by, nor made obvious over, the prior art of record.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2627

7. Any inquiry concerning this communication or earlier communication from the examiner should be directed to Kim CHU whose telephone number is (571) 272-7585 between 9:30 am to 6:00 pm, Monday to Friday.
